PERSONAL PROFILE

Motivated and highly independent Cyber Security and Management student with a strong interest in AI security, vulnerability management, secure software systems and data protection. Currently developing practical knowledge of cybersecurity tools, risk management, secure digital systems and compliance through academic study and hands-on learning.

I am particularly interested in supporting organisations that build secure, transparent and ethical AI-integrated systems. I understand the importance of confidentiality, professional integrity and responsible handling of sensitive client data, especially when working with automated communication tools, customer information, digital platforms and AI-supported applications.

KEY SKILLS

Cybersecurity & Vulnerability Management	Threat identification, risk assessment, mitigation strategies, footprinting, scanning, enumeration and security documentation.
AI Security & Secure Digital Systems	Strong interest in securing AI-integrated software, automated workflows, customer data flows and third-party integrations.
Compliance & Data Protection	Understanding of UK GDPR, privacy, confidentiality and responsible handling of client/customer information.
Technical Tools	Nmap, ping, WHOIS, DNS investigation, basic network analysis, Microsoft Office, Google Workspace and report writing.
Professional Strengths	High integrity, attention to detail, independent working, clear communication, reliability and willingness to support junior learners.

EDUCATION

MSc Cyber Security and Management

University of Law, Manchester Campus | 2025 - 2026

- Relevant learning areas include cyber security management and compliance, data security, network and cloud management, cyber security for business, risk-based decision-making and ethical responsibility in technology.
- Developing understanding of how organisations manage security risks, protect data and implement secure technology solutions.

CERTIFICATION

Cyber Security Techniques and Tools

AICTE Training and Learning Academy

- Developed knowledge of cybersecurity tools, technical security concepts and practical approaches used to identify and manage cyber risks.

ACADEMIC CYBERSECURITY EXPERIENCE

Cybersecurity Footprinting and Vulnerability Assessment Work

- Practised basic cybersecurity investigation methods in a controlled academic environment.
- Used reconnaissance and assessment tools to understand target visibility, network exposure and potential security risks.
- Applied tools such as ping, WHOIS, DNS lookup techniques and Nmap to gather technical information.
- Analysed results to identify possible risks such as exposed services, unnecessary open ports and information leakage.
- Recommended mitigation strategies including firewall configuration, service hardening, access control, patch management and monitoring.
- Produced written security documentation explaining methodology, findings, limitations and recommendations.

CAREER AMBITION

My career ambition is to grow into a professional role in AI cybersecurity, SOC analysis, cloud security and cyber risk management. I want to develop hands-on experience protecting real business systems, identifying vulnerabilities, supporting secure software delivery and helping organisations use AI safely.

LANGUAGES & INTERESTS

Languages English, Hindi, Gujarati

Interests Cybersecurity learning, ethical hacking practice, AI security, responsible technology, reading, outdoor activities and sports.
